01 / THE WORKFLOW

# LinkedIn Rebuild

Paste a B2B founder's LinkedIn URL. Get back a teardown of their profile, a rebuilt version of it, a first post and two emails for Ziad to send.

Ziad Hassan · founder, PM | Charlotte Driscoll | Yuri Mukai | Dan Chauvin

1 · STARTUP

## Sawa

An AI-native marketing agency, starting with a narrow focus on B2B content. Each client gets three plans:

- **Grow.** LinkedIn content fills the top of the funnel.
- **Engage.** Readers become newsletter subscribers.
- **Convert.** Emails that get them to an event, a discount or an upsell.

Clients pay a setup fee, then a monthly retainer to keep it running.

2 · WHY NOW

## LinkedIn is where the demand is

Our biggest demand is LinkedIn content. The best pitch to a founder is their own profile, rebuilt, before we ever talk.

Ziad wants every pitch built from the founder's own profile and posts. This workflow makes one from a single URL.

3 · USER AND TRIGGER

**User:** Ziad. He runs it and approves everything before it goes out.

**Trigger:** a founder Ziad wants as a client. He pastes their URL.

4 · INPUT

One LinkedIn profile URL.

**Real example:** `linkedin.com/in/ziad-has` , Ziad's own profile and our model of a good one.

**Target:** founders and CEOs of B2B companies, 10 to 200 staff.

5 · STEPS

| | | | |
|---|---|---|---|
| 1 | **Pull** | Apify | Profile plus the last 90 days of posts, saved as JSON. |
| 2 | **Score** | Claude Code | Posting stats and Ziad's 7-point checklist. Each check is Pass or Fix, with the fact behind it. |
| 3 | **Rebuild** | Claude Code | HTML mockup of the top of their profile, fixed. Colors from their company site. |
| 4 | **Post** | Claude Code | One first post we would write for them, in their voice, from their own material. |
| 5 | **Email** | Claude Code | Email 1 shows the work, with no link. Email 2 is a bump with the 15-minute booking link. |
| 6 | **Review** | Ziad | Reads the whole folder. Drafts the emails into his own inbox. |

6 · OUTPUT

One folder per founder, `out/<name>/` :

- `teardown.md`
- `mockup.html`
- `first-post.md`
- `email-1.md`
- `email-2-bump.md`

**Booking link (email 2 only):** `calendly.com/ziad-startsawa/15min`

WHAT GREAT LOOKS LIKE

## Ziad's checklist for a good founder profile

1. Headshot on a solid color background
2. Website link under the name
3. A banner
4. About section filled out, in bullets
5. At least one featured post with an image
6. Short, clear headline
7. Follow button instead of Connect

**Plus posting stats:** posts in the last 90 days, days since the last post, average reactions and comments.

HOW WE JUDGE IT

- Every number matches the scraped data.
- The email names one specific thing from their profile or posts.
- Email 1 has no link.
- Zero em dashes. Passes the anti-AI rules.
- Ziad would send it without edits.

7 · HUMAN CHECKPOINTS

- Ziad reads the whole folder before anything leaves.
- Emails land as drafts in Ziad's inbox. He sends them.
- The bump goes only if there is no reply, and only when Ziad says so.
- Nothing sends on its own.

8 · DEFINITION OF DONE

`/rebuild <url>` in Claude Code writes all five files.

Works on **3 real founder URLs** with consistent results.

9 · STRETCH GOALS

- A web page with a URL box and a Generate button
- Banner saved as a PNG at 1584 x 396
- New headshot on a solid background
- Emails dropped straight into Ziad's drafts
- A list of URLs in, one folder each

10 · WORKSTREAMS

- **A · Data.** Apify setup, the pull, the teardown. Owner brings their own Apify key.
- **B · Rebuild.** The mockup and the first post.
- **C · Email and demo.** Both emails, 3 test runs, the video.
- **Ziad.** Answers questions and judges the output, without taking the keyboard.

11 · INPUTS READY TO USE

Private repo: `github.com/ziad-from-sawa/linkedin-rebuild` . It holds this brief, the Sawa context, the checklist, the anti-AI rules, Ziad's voice notes and the test URLs. Open it in Claude Code and it reads `CLAUDE.md` first.

12 · OPEN QUESTIONS, FIRST 10 MIN

- Who takes A, B and C?
- Who coaches? Who types first?
- How many days before the bump?
- Email 1: attach the mockup, or offer to send it?

02 / BUILD IT

# Starter checklist

Build each step alone and test it on Ziad's URL before adding the next. Rotate the keyboard. The teammate with the least AI experience drives first.

## 00 Setup

EVERYONE · 10 MIN

- [ ] Accept the GitHub invite. Clone `linkedin-rebuild`.
- [ ] Open the folder in Claude Code: `claude`
- [ ] Ask: "Read CLAUDE.md and the brief. Restate the workflow as numbered steps with inputs and outputs."
- [ ] Fix anything Claude gets wrong before building.

**Done when** Claude restates all 6 steps correctly.

## 01 Pull the data

WORKSTREAM A

- [ ] Make a free Apify account. Paste your token into `.env` as `APIFY_API_TOKEN`.
- [ ] Profile: `apimaestro/linkedin-profile-batch-scraper-no-cookies-required`
- [ ] Posts: `apimaestro/linkedin-batch-profile-posts-scraper`. It has no date filter, so keep the last 90 days yourself.
- [ ] Skip `harvestapi` actors. Free plans cap them at 10 runs.
- [ ] Save raw JSON to `out/<name>/raw/`. Then score it against `context/profile-checklist.md`.

**Done when** `teardown.md` for Ziad's URL shows all 7 checks and every number matches the JSON.

## 02 Produce the mockup

WORKSTREAM B

- [ ] Build `mockup.html`: the top of their LinkedIn profile, with every Fix from the teardown fixed.
- [ ] Include: banner, headshot on a solid color, short headline, website link, Follow button, About in bullets, one featured post with an image.
- [ ] Pull their brand colors from their company website.
- [ ] Open it in a browser and compare it to Ziad's profile.

**Done when** the mockup passes all 7 checks by eye.

## 03 Produce the first post

WORKSTREAM B

- [ ] Read their recent posts and About section first.
- [ ] Write one post on a topic they already talk about, in their voice.
- [ ] Use only facts from their profile or posts. Invent nothing.
- [ ] Run the anti-AI rules. Search for dashes by hand.

**Done when** the founder could post it without explaining where a claim came from.

## 04 Produce the email

WORKSTREAM C

- [ ] **Email 1:** from Ziad, in his voice (`context/ziad-voice.md`). Opens with one specific detail from their profile. Shows the work. No links.
- [ ] **Email 2, the bump:** short. Adds `calendly.com/ziad-startsawa/15min` for a 15-minute call.
- [ ] The team writes the copy. There is no past winner to copy from.
- [ ] Save both as drafts for Ziad. Never send.

**Done when** Ziad reads both and would send them as written.

## 05 Save it as one command

A AND C

- [ ] Create `.claude/commands/rebuild.md` so `/rebuild <url>` runs steps 01 to 04 in order.
- [ ] Run it on 3 founder URLs from `inputs/test-urls.md`.
- [ ] Log what breaks. Fix one thing at a time.

**Done when** 3 runs give 3 complete folders of the same quality.

## 06 Optional: UI/UX wrapper

WHOEVER FINISHES FIRST

- [ ] A local web page with one URL box and a Generate button. It runs `claude -p "/rebuild <url>"` and shows the five outputs side by side, with the mockup rendered.

THE 80 MINUTES

| 0:05 | 0:15 | 0:50 | 0:55 | 1:15 |
|---|---|---|---|---|
| Ziad walks the brief. Pick A, B, C. | Sprint 1: first teardown on Ziad's URL. | Screenshot of the first output to the team thread. | Sprint 2: `/rebuild` on 3 URLs, fix what breaks. | Pick tonight's finish list and who records the video (due 9 pm). |
